

Bidali Products

Payments

Bidali Payments is a full service payment platform that enables merchants to accept cryptocurrency payments without needing to know how blockchain payments work. It does this via an intuitive user interface while eliminating the compliance overhead, accounting headache and volatility risk.

Checkout

Bidali Checkout is the front-end facing component of Bidali Payments that allows any merchant to accept cryptocurrency on web and mobile with just a few lines of code.

Gift Cards

Bidali Gift Cards was our initial proof of concept that we used in order to be our own merchant and to figure out how cryptocurrency should work. It has grown into its own product offering, now boasting the ability for people to purchase over 100 brands across 4 countries.

Commerce

Bidali Commerce is our cross platform SDK that allows any developer to offer the ability for their platform users to purchase products with digital assets from any of Bidali's supported brands. It can be integrated as a dApp, natively on Android and iOS, in a React Native app, or on web.
